Tutorial 2 - Solutions

Exercise 1*

(Assume that A, B are process constants and a, b are channel names.)

- $a.b.A + B$ **Correct**
- $(a.Nil + \overline{a}.A) \setminus \{a, b\}$ **Correct**
- $(a.Nil \mid \overline{a}.A) \setminus \{a, \tau\}$ **False**, τ can not be used in a restriction
- $a.B + [a/b]$ **False**, relabelling can be applied only on a valid process expression
- $\tau.\tau.B + Nil$ **Correct**
- $(a.B + b.B)[a/b, b/a]$ **Correct**
- $(a.B + \tau.B)[a/\tau, b/a]$ **False**, the relabeling function should satisfy $f(\tau) = \tau$
- $(a.b.A + \overline{a}.Nil) \mid B$ **Correct**
- $(a.b.A + \overline{a}.Nil).B$ **False**, only actions can be used as prefixes
- $(a.b.A + \overline{a}.Nil) + B$ **Correct**
- $(Nil \mid Nil) + Nil$ **Correct**

Exercise 2*

- Derivation of $(A \mid \overline{b}.Nil) \setminus \{b\} \xrightarrow{\tau} (a.B \mid Nil) \setminus \{b\}$.

$$\text{RES}\ \frac{\text{COM3}\ \dfrac{\text{CON}\ \dfrac{\text{ACT}\ \dfrac{}{b.a.B \xrightarrow{b} a.B}}{A \xrightarrow{b} a.B}\ A \stackrel{\text{def}}{=} b.a.B \qquad \text{ACT}\ \dfrac{}{\overline{b}.Nil \xrightarrow{\overline{b}} Nil}}{(A \mid \overline{b}.Nil) \xrightarrow{\tau} (a.B \mid Nil)}}{(A \mid \overline{b}.Nil) \setminus \{b\} \xrightarrow{\tau} (a.B \mid Nil) \setminus \{b\}}\ \tau, \overline{\tau} \notin \{b\}$$

- Derivation of $(A \mid \overline{b}.a.B) + (\overline{b}.A)[a/b] \xrightarrow{\overline{b}} (A \mid a.B)$.

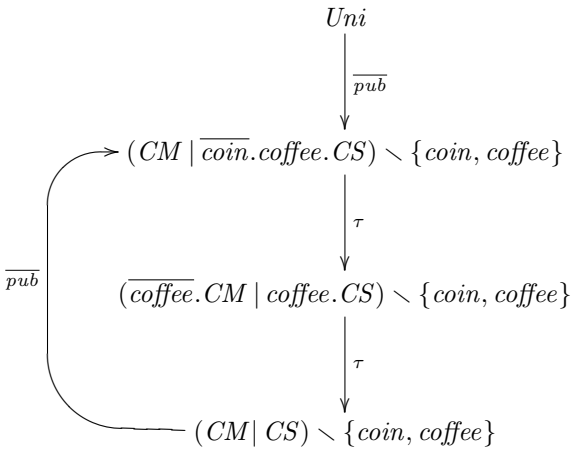
$$\text{SUM1}\ \frac{\text{COM2}\ \dfrac{\text{ACT}\ \dfrac{}{\overline{b}.a.B \xrightarrow{\overline{b}} a.B}}{A \mid \overline{b}.a.B \xrightarrow{\overline{b}} A \mid a.B}}{(A \mid \overline{b}.a.B) + (\overline{b}.A)[a/b] \xrightarrow{\overline{b}} (A \mid a.B)}$$

- Derivation of $(A \mid \overline{b}.a.B) + (\overline{b}.A)[a/b] \xrightarrow{\overline{a}} A[a/b]$.

$$\text{SUM2}\ \frac{\text{REL}\ \dfrac{\text{ACT}\ \dfrac{}{\overline{b}.A \xrightarrow{\overline{b}} A}}{(\overline{b}.A)[a/b] \xrightarrow{\overline{a}} A[a/b]}}{(A \mid \overline{b}.a.B) + (\overline{b}.A)[a/b] \xrightarrow{\overline{a}} A[a/b]}$$

Exercise 3*

LTS for the process $Uni \stackrel{\text{def}}{=} (CM \mid CS) \setminus \{coin, coffee\}$.



Exercise 4

Transition system for $A \stackrel{\text{def}}{=} (a.A) \setminus \{b\}$.

$$A \xrightarrow{a} A \setminus \{b\} \xrightarrow{a} (A \setminus \{b\}) \setminus \{b\} \xrightarrow{a} \big((A \setminus \{b\}) \setminus \{b\}\big) \setminus \{b\} \xrightarrow{a} \cdots$$

One solution could be the CCS defining equation $B \stackrel{\text{def}}{=} a.B$ which generates a finite LTS with (intuitively) the same behavior as A.
