### *Short annotation*

The aim of this symposium is to explore the notion of *hyperintensionality*.

This notion is anchored to foundational research in philosophical logic. One example is formal semantics and its research into linguistic meaning, synonymy, reference, and expressive power. Another example is attitude logic and its research into closure principles, illogical attitudes, omniscience, and the flow of information.

The intention behind the symposium is to highlight the different reasons for opting for a hyperintensional framework in one's semantic, logical or philosophical pursuits and not least the different forms hyperintensional frameworks may assume.
